

## Pre-test Analyses

1. We tested 76 participants of which 69 data sets were complete.
2. The nine characters selected as most natural were: Bergmite, Gourageist, Grubbin, Jangmo, Shelmet, Wimpod, Zorua, Scraggy and Scatterbug.
3. All of the 9 characters were rated below 4 on familiarity
4. The two most neutral and least familiar were Shelmet and Gourageist
5. Those two were not different on both valence ( $p = 0,393$ ) and familiarity ( $p = 0,355$ ). BFs in favor of null hypothesis (assuming no difference) were 7,343 on valence and 6,905 on familiarity.

THEREFORE:

SHELMET and GOURGEIST are the two figures best matching criteria.
